

Test Summary Report

Project Links: [Jira](#) | [Create Resort Tapped Account](#) | [Login](#) | [Github](#)

Test Summary Report

- Items tested include creating user accounts, adding and editing resorts, contact groups, and individual contacts, testing validated/required fields, saving and publishing functionality, API testing for updated information. After an unscheduled update regression and retesting was performed on all test cases.
- The Resort Tapped was tested using a Chrome browser.

Variances

- Variances included challenges with requirements documentation not being current.
- Issues included challenges with contact field functionality, custom sorting of contacts, and cancelled data carrying over during resort creation. There was an API 500 internal server error when a contact group was published without contacts, leading to an unplanned upgrade/fix.

Testing Done vs. Test Objectives

- All objectives set were able to be met and tested.
- Additional testing was performed after the API fix/upgrade.

Summary

- Testing was completed on all functions listed above.
- Tools used included Chrome, Postman, Nightwatch.js.
- Regression testing was performed after most recent API update.
- Recommendations to improve the product include:
 - Recommendations for improvement when creating an account RT-13
 - Recommendation for save confirmation message improvement RT-19

- Bugs reported that were fixed included:
 - API 500 Internal Server Error RT-23
- Bugs reported that are still in-progress include:
 - Resort creation cancelled - emergency data carry-Over RT-7
 - Contact fields saving without required fields RT-14
 - Custom contact sort deleting name of newly added/edited field RT-16
 - Contact map pin highlighting contacts page behind popup and duplicating instructions RT-17
 - Contact image upload doesn't follow requirements RT-18
 - Contact description field hyperlink not behaving as expected RT-20
 - Contact description field text formatting errors RT-21
 - Unpublished changes message not going away RT-24

Evaluation Activity Summary

- The Resort Tapped application is a all-season guide to Resorts. It allows you to edit, add and remove resorts. Overall employees should be able to access the app and edit their resort information easily. With a few fixes this will make a very smooth app for employees to use.

Activity Summary

- Time was spent testing the functionality listed above. Time was spent with the first round of testing, writing bug reports, and regression testing/retesting after an unscheduled API fix upgrade needed to be pushed out that had the possibility to have other upgrades attached that could have impacted the app.
